

Lab# 03: Creating Fake IDs and Social Media Intelligence

Objective: Learn about Fake Identities (Sock Puppets) and analyse Social-media portals.

1. SOCK Puppets

In cybersecurity, Sock Puppets refer to Fake Online Identities created to deceive others. These identities are often meticulously crafted to appear legitimate and trustworthy. They're closely linked to fake identity generation, but with a specific focus on online interactions. Sock puppets are not real people, have fabricated names, backgrounds, and online presences. These fake identities are used to manipulate or trick online users for malicious purposes. One person (Puppeteer) controls the sock puppet account and its online activity to create a believable online persona. This can involve:

- Fake Names and Backgrounds: Using fake name generators or creating fictional backstories to appear genuine.
- Social Media Profiles: Setting up social media accounts with fabricated profiles, photos, and interests.
- Content Creation: Generating posts, comments, or reviews to further establish the sock puppet's online presence.

Sock puppets are employed for various malicious activities in cybersecurity, including:

- Spreading Misinformation: Sock puppets can be used to propagate false information, manipulate online discussions, or damage reputations.
- Social Engineering Attacks: The puppet master can use the sock puppet to build trust with victims and then exploit that trust for phishing attacks or other scams.
- Astroturfing: Sock puppets can be used to create the illusion of grassroots support for a particular cause or product through fake reviews or endorsements.
- Censorship and Disruption: Sock puppet accounts can be used to silence legitimate voices in online discussions or disrupt online communities.

By understanding sock puppets and their connection to fake identity generation, you can be more vigilant in your online interactions and help maintain a safer online environment.

a.) Fake Name Generator

Step 1: Open link from <https://www.fakenamegenerator.com/advanced.php>

Step 2: Select options to generate a random fake identity.

Your Randomly Generated Identity**Name set**

sandra.sanders5@example1e.com

c.) Fake Photo ID

Step 1: Open link from <https://www.fake-id.com/shop> and edit name, DoB, Place, Nationality and Expiry to generate a fake photo identification card.

[illegible]

d.) Use Temporary Email

Step 1: Open <https://www.temporary-mail.net/> to get a disposable randomly generated email address with mailbox. This can receive emails and you may choose a domain for this temporary mail.

2. Soc-M-INT (Social Media Intelligence)

Soc-M-INT or SMI (Social Media Intelligence) refers to the collective methods and tools used to gather, analyse, and interpret data from social media platforms and gain valuable insights. This data can come from various sources, including:

- Public social media profiles: User posts, comments, and interactions on platforms like Facebook, Twitter, Instagram, etc.
- Online forums and communities: Discussions and exchanges on message boards, Reddit threads, or other online gathering places.
- Public blog posts and reviews: Content shared by users about brands, products, or events.

Soc-M-INT goes beyond simply monitoring social media mentions. It involves applying analytical techniques to extract meaningful information from the data. Benefits of Soc-M-INT:

- Improved Brand Reputation: By monitoring social media sentiment, organizations can identify and address negative perceptions about their brand.
- Market Research: Analyse social media trends and user discussions to understand customer needs and preferences.
- Competitive Analysis: See what your competitors are doing on social media and how audiences are responding.
- Crisis Management: Quickly identify and respond to potential crises brewing online.
- Law Enforcement: Can be used to gather evidence or track suspicious activity.

Soc-M-INT has applications across various sectors:

- Marketing: Social media listening helps businesses understand their target audience and tailor their marketing strategies.
- Public Relations: Monitor brand mentions and respond to customer inquiries and feedback.
- Law Enforcement: Investigate criminal activity and identify potential threats.
- Cybersecurity: Track malware distribution or online scams.
- Government Agencies: Monitor public sentiment and gauge public opinion on policies or events.

These platforms aggregate data from various social media sources and provide analytics dashboards for deeper insights. They also analyse the emotional tone of social media posts to understand public opinion and track brand mentions and identify relevant conversations. While Soc-M-INT offers valuable

insights, it's crucial to respect user privacy. Only collect and analyse publicly available data, and ensure compliance with relevant data privacy regulations.

By leveraging Soc-M-INT effectively, organizations can gain a deeper understanding of their online presence, their target audience, and the broader social landscape.

a.) Sentiment Analysis

Step 1: Open https://www.csc2.ncsu.edu/faculty/healey/tweet_viz/tweet_app/ to perform Social-media sentiment visualization based on keywords.

Step 2: With various options we can analyse Posts

The screenshot shows the 'Social Media Sentiment Visualization' tool interface with the 'Posts' tab selected. The main content area displays a list of posts. The table below represents the data shown in the screenshot.

Date	User	v	a	Text
06-05-24 06:39	WayneBoron	6.17	4.44	[r/The_Observatorial] The world's biggest election deals a blow to the Indian Prime Minister:

b.) Twitter Analysis

Step 1: Open <https://socialbearing.com/search/general/UPES> to view X or Twitter posts by reach, impressions, replies, favorites or hidden.

c.) Find Social Media Trends

Step 1: Use <https://www.social-searcher.com/> to create a free account and monitor 7 public social media mentions. Type in a keyword to view analytics for mentions, users and sentiment trends.

Step 2: This portal reports from 7 different social media platforms.

d.) Brand24

Step 1: Use link https://app.brand24.com/user/register-account/?custom_form=6 to create your profile for your social media analysis to discover what people say about your brand, product or service.

Step 2: Learn about Brand24 from <https://brand24.com/blog/what-is-social-media-intelligence/>

e.) Instant Username

Step 1: Open Instant Username Search site, enter social media profile name/ID

Step 3: The site reports where the profile ID is listed and where it is still available. This can be used to track people on social media → <https://instantusername.com>

f.) EPIEOS

Step 1: Another way to find if an account exists on a social media portal is via 'forgot password' option. But with 100s of social media portals, it becomes difficult to check manually. This is where Epieos comes in to automatically check details of profiles on social media portals. Verify your access using the free pricing option <https://epieos.com/auth/verify-request>

Step 2: Enter Email / Phone

Step 3: Get details of user email on portals, Photo, Google Map, Calendar etc.

g.) PROOFY

Step 1: To verify if a user's email ID exists and find its details (free or org email) use <https://Proofy.io>

h.) DEHASHED

DeHashed is a public data search-engine created for Security Analysts, Journalists, Security Companies, and everyday people to help secure accounts and provide insight on breaches and account leaks. DeHashed can also be used for investigations & fraud prevention.

Step 1: Create your account on <https://dehashed.com>

Lab activities:

- Perform the above-mentioned steps and present your work in WORD file with screenshots snipped with relevant details.
- Do NOT copy from others, else your submission will be graded ZERO.
