

Lab #7 : Learn Basic OSINT Investigations

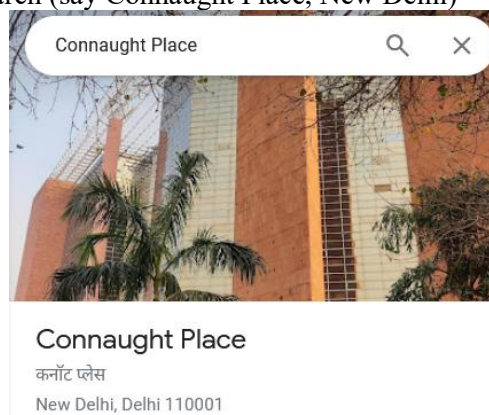

Objective: Learn to discover the world around you – refer to Unit 5 (OSINT) for tools/URLs.

a.) Google Maps

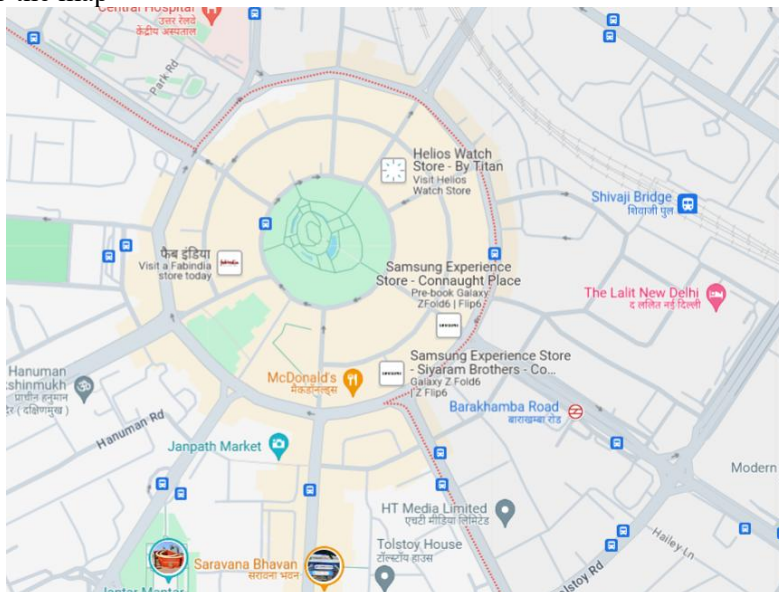

This is a powerful tool that can be used for more than just finding directions from one place to another. It can also be used for performing Geospatial OSINT (Open-Source Intelligence). This type of intelligence gathering is the process of collecting data from public sources to be used in an intelligence analysis.

Step 1: Open <https://www.google.com/maps>

Step 2: Enter a location to search (say Connaught Place, New Delhi)

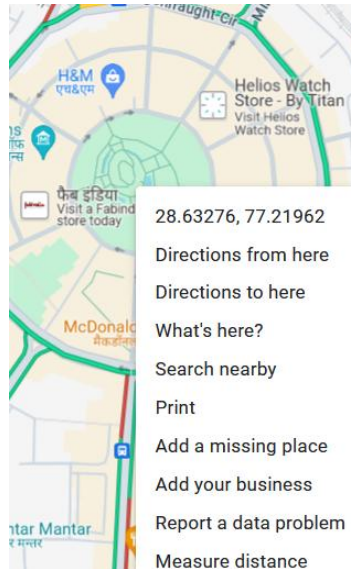

Step 3: Zoom into the map

Step 4: Click 'Layers' to view detailed Satellite Imagery with traffic, shops, offices, ATMs....

Step 5: Drag and drop the 'Yellow man' on a road, now you the Street View - move in that location

Step 6: Right click to find coordinates and other details of that location on the map

b.) **Other OSINT tools** → Google Earth, Wikimapia, IP2Location, Google Dorking, OpenInFrameMaps... covered in Unit 5.

c.) Use <https://osint.rocks/>

Perform the below OSINT investigations:

Investigation #1: rekt.systems

Objective: Go looking for some useful information in the wild using OSINT. Our target for today is Rekt Systems → Cybersecurity company with a web presence at <https://rekt.systems>.

Investigation #2: WhatsApp Investigations

WhatsApp, one of the most widely used communication platforms globally, plays a vital role in many cyber investigations. Whether tracking the activities of individuals or uncovering fraudulent business practices, the ability to extract profile data can provide investigators with critical information. In conjunction with OSINT techniques, this data helps digital forensics teams build a comprehensive understanding of their subjects, tracing their digital footprint through publicly available information. In the realm of digital investigations, accessing detailed information about online profiles has become a crucial tool for law enforcement and cybercrime experts.

Objective: Use [Whatsapp.checkleaked.cc](http://whatsapp.checkleaked.cc) gain deeper insights into both business and personal WhatsApp accounts without needing access credentials or login details, adding immense value to the growing field of Open Source Intelligence (OSINT).

Investigation #3: Image Investigation

Objective: The photo was shared on social media. It clearly depicts a train station.

Click [here](#) to open the photo on a new page.

Investigation #4: Image Investigation

Objective: This is a photo of a resort located on an island.

Click [here](#) to open the photo on a new tab.

Investigation #5: Image Investigation

Objective: The photo was taken a few years ago in a beautiful city.

Click [here](#) to open photo on a new window.

Lab Activities:

Investigation #1

- Based on job postings, RektSystems is using which version of phpMyAdmin?
- You'll notice a reference to a Xerox machine used to generate this PDF. You have a specific identifier that you can use to search for vulnerabilities. Perform a Google search for the CVE associated with the vulnerable Xerox device. What is the CVE of that vulnerability?
- Using the country code or street discovered in the WhoIS response, determine in which country the registrant (rekt.systems) is located.
- What is the email address of the CEO of Rekt Systems?

Investigation #2

- Use the URL to gain deeper insights from at least three business and personal WhatsApp accounts without needing access credentials or login details.

Investigation #3

- What is the name of the train station seen in the photo?
- What is the name and height of the tallest structure seen in the photo?

Investigation #4

- What is the name of the resort?
- What are the coordinates of the island?
- In which cardinal direction was the camera facing when the photo was taken?

Investigation #5

Your task is to find the answers to these questions:

- Where was this photograph taken?
- In which year was this photo taken?
- The big poster on right contains a website link, what was the link?
